EDUCATION

Dr.MGR Educational and Research Technology, B.Tech in Information Technology

Sep 2022 – May 2026

CGPA: 7.5/10

Coursework: Red Hat,Full Stack Development,Blockchain and IOT.

INTERNSHIP EXPERIENCE

Corizo – Web Development Intern

Nov 2023 – Dec 2023

- Built responsive web apps using HTML, CSS, JavaScript, and React.js.
- Designed UI components with Bootstrap and Tailwind CSS for improved UX.
- Collaborated with teams to debug, optimize performance, and improve design.
- Built an intuitive interface for task creation and real-time status updates.

Null Class – Web Development Intern

Apr 2024 – May 2024

- Designed a custom video player with skip-forward/backward features.
- Enhanced navigation and playback across mobile/desktop platforms.
- Created a minimalist UI that hides during playback for distraction-free viewing.

PROJECTS

Rapid Care – Hospital Finder with Realtime availability and Information

Jan 2025 – Apr 2025

- Focuses on the core idea of finding hospitals quickly during emergencies while ensuring up-to-date availability of beds, doctors, and facilities. Let me know if you need a different angle.
- A multilingual (Tamil English) real-time hospital emergency response app offering live updates on hospital facilities, ambulance booking, and smart integration of healthcare resources in Chennai.
- Technologies Used: Flutter (mobile app), Node.js (backend server), MongoDB (database), Firebase/Auth0 (authentication), Google Maps API (location / traffic), Razorpay/UPI (payment), RESTful APIs, AWS or Firebase Hosting (cloud deployment).

Toxic Gas Detector – Human-Centric Toxic Gas Detection and Public Alert System

July 2025 – Dec 2025

- Working on a IOT project that Designed and developed a low-cost IoT-based system to detect and monitor LPG and Carbon Monoxide gas levels in real-time using embedded sensors.
- Implemented threshold-based alerting: Configured the system to automatically trigger audible alerts via an on-board buzzer when LPG or CO gas levels exceeded safe limits (based on PPM standards).
- Technologies Used: Arduino (Atmega2560), MQ-5 MQ-9 gas sensors, ESP8266 Wi-Fi module, C programming, JavaScript, Amazon Web Services (AWS), JSON, HTTP, TCP/IP, 802.11 Wi-Fi, Arduino IDE, OLED Display (SSD1306).
- Software Stack: Embedded C (firmware development), Arduino IDE (programming deployment), AWS (cloud platform web hosting), JavaScript (cloud service scripting), HTML/CSS (web dashboard), JSON (data exchange format).

TECHNOLOGIES AND SKILLS

Languages: Python, c,c++, HTML, CSS

Frameworks: ReactJS, NodeJS, Bootstrap

Databases: MongoDB, MySQL

Soft Skills: Time Management,Team Work,Adaptability

CERTIFICATIONS

- Red hat – RHCSA
- Blockchain And IOT – IIT ROPAR
- Full Stack Web Development – Corizo
- Google Cloud Computing Foundation – NPTEL

ACHIEVEMENTS AND VOLUNTEERING

- **ICON'25 – 10th National Conference on Sustainable IT:** Committee Coordinator.
- **Workshop in SIMATS:** About MERN,Figma,Argumented Reality and Virtual Reality.
- **Workshop in IIT Ropar:** About Blockchain and IOT
- **National Seminar SPACE:** Attended both 2.0 and 4.0 National Seminar by Indian Technology of Congress Association (ITCA)
